<u>About The Automation Tests:</u>

I wrote Automation Tests for most of the main scenarios according to my discretion and within the time I had.

because i write the automation test in java - i use it in Maven to package all the tests and i upload it to my gitHub.

I write the tests according to Page Object Model (Design Pattern) so as you will see the tests divided to 2 parts:

 package #1 (Pages AutomationAssignment_UriaBonen): contain all the functionality, paths of elements, conditions , synchronize etc.

package #2 (TestCases) contain all the Test Cases.

Thank you.
